REASONS FOR ALLOWANCE

2. Claims 13-15, 17-19, 2125, 27, 28, 30, 31, 34-39 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Claims 13-15, 17-19, 2125, 27, 28, 30, 31, 34-39 are allowable over the prior art of record for the reason as stated in the Applicant's Remark dated on 4/15/2008 pages 9-10 and the reasons as below:

Regarding to claim 13, none of the prior art of record teaches or suggests A method of operating electrical circuitry included in an user exchangeable cover part that is electrically interconnected to a wireless terminal by an electrical connector, the method comprising: an electrical circuitry, wherein the electrical circuitry that is operated in dependence upon the identification of the user exchangeable cover part comprises circuitry for supporting a user interface of the wireless terminal and circuitry in addition to or other than circuitry included within a display screen of the user interface, and wherein the connector has a plurality of pins, and at least one of the connector pins is

operated in an identification state for sensing a circuit element value included in an identification unit configured to identify the class of the user exchangeable cover part and which is part of the user exchangeable cover part, and afterwards is operated in an operation state for transferring electrical signals between the wireless terminal and the electrical circuitry of the user exchangeable cover part. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 15, none of the prior art of record teaches or suggests A wireless communication terminal comprising a user exchangeable cover part and a display screen, wherein the wireless communication terminal and user exchangeable cover part are electrically interconnected by an electrical connector wherein: the user exchangeable cover part comprises an identification unit; the wireless terminal is configured to identify the user exchangeable cover part by detecting the identification unit the wireless terminal is configured to operate the electrical circuitry of the user exchangeable cover part, including the circuitry for supporting the user

interface, in dependence upon the identification unit of the user exchangeable cover part; the connector includes a plurality of connector pins arranged in line and separated by an equal distance; and at least one of the connector pins is configured to be operated in an identification state for sensing a circuit element value included in the identification unit, and in an operation state for transferring electrical signals between the wireless terminal and the electrical circuitry of the user exchangeable cover part.. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 22, none of the prior art of record teaches or suggests A user exchangeable cover part comprising: an electrical connector part for electrically connecting to a wireless communication terminal in an attached position including an identification unit; and electrical circuitry for supporting a user interface of the wireless terminal, the electrical circuitry comprising circuitry in addition to or other than electrical circuitry included within the display screen, wherein the user exchangeable cover part allows the wireless communication terminal to operate the electrical circuitry of the user

exchangeable cover part, including the electrical circuitry for supporting the user interface, in dependence upon the identification unit of the user exchangeable cover part; and wherein the connector part is configured to be operated in an identification state for sensing a circuit element value included in the identification unit, and in an operation state for transferring electrical signals between the wireless terminal and the electrical circuitry of the user exchangeable cover part. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 23, none of the prior art of record teaches or suggests An exchangeable cover part comprising: electrical circuitry for supporting a user interface of a wireless terminal releasably attached to the exchangeable cover part; an electrical connector part for electrically connecting the electrical circuitry to the wireless communication terminal; and an illumination unit supported by the electrical circuitry, wherein the electrical circuitry is configured to cause the illumination unit to illuminate based upon a ringing signal received from the wireless terminal through the electrical connector part.

It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 24, none of the prior art of record teaches or suggests An exchangeable cover part comprising: a an electrical connector for electrically connecting the electrical circuitry to a wireless communication terminal releasably attached to the exchangeable cover part, wherein the electrical connector is configured to transmit the signal to the wireless communication terminal; and an identification unit configured to identify the user exchangeable cover part, the identification unit comprising a circuit element having a circuit element value, wherein the electrical connector is further configured to be operated in an identification state for sensing the circuit element value included in the identification unit for identifying the user exchangeable cover part.. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 30, none of the prior art of record teaches or suggests An exchangeable cover part comprising: an electrical connector for transmitting data between the electrical circuitry and the wireless communication terminal;

wherein the electrical circuitry comprises a memory device containing data to be downloaded to the wireless communication terminal via the electrical connector for execution by the wireless communication terminal; and wherein the data to be downloaded includes gaming executables. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 34, none of the prior art of record teaches or suggests An apparatus for operating electrical circuitry included in a user exchangeable cover part that is electrically interconnected to a wireless terminal by an electrical connector, the apparatus comprising: means for identifying a class of the user exchangeable cover part; and means for operating the electrical circuitry of the user exchangeable cover part in dependence upon an identification of the user exchangeable cover part, wherein the electrical circuitry that is operated in dependence upon the identification of the user exchangeable cover part comprises circuitry for supporting a user interface of a wireless terminal and circuitry in addition to or other than circuitry included within a display screen of the user interface, and wherein the electrical

connector has a plurality of pins, and at least one of the connector pins is operated in an identification state for sensing a circuit element value included in the means for identifying which is configured to identify the class of the user exchangeable cover part and which is part of the user exchangeable cover part, and afterwards is operated in an operation state for transferring electrical signals between the wireless terminal and the electrical circuitry of the user exchangeable cover part. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
